

GOGREEN PLUS CERTIFICATE 2025

Innomotics

used **DHL GoGreen Plus** Low Emission Transport Services for air transportation, facilitated by sustainable aviation fuel. For the selected shipments transported for the above customer, a third-party auditor verified the below numbers as part of this service:

Measure	Unit	Low Emission Transport Service	Reference Standard Service ¹
Total WtW emissions	t CO ₂ e	43.73	90.20
Tonne-km transported	tkm	124,411.52	124,411.52
WtW Carbon Intensity	g CO ₂ e / tkm	351.50	725.04
		Sustainable Aviation Fuel	Reference Jet A
Energy Source	Tonnes	14.20	14.29
(Fuels/Electricity) ²	m MJ	0.62	0.61
	Liters	18,445.14	17,641.36
Sustainable Aviation Fuel Share	%	100%	
Reduced WtW emissions	t CO ₂ e	46.47 (-52%)	
Fuel Switch Partner	Feedstock ³	Certification	
IAG	UCOME	ISCC	
Air France KLM	UCOME	ISCC	

Certificate ID: **DHL-DGF-AFR-202602-00104**

Further information on GoGreen Plus Services can be obtained at: GoGreenPlus.DGF@dhl.com

Henk Venema

Executive Vice President
Global Head of Air Freight
DHL Global Forwarding

This certificate is issued by DHL Global Forwarding and covers the unique audited shipments that were recorded and completed in the system at the time of the audit. Details about those shipments, can be provided upon request. The emissions have been calculated and reduced via expenditures on sustainable aviation fuel as mentioned above. SGS (Société Générale de Surveillance) has verified the tracked greenhouse gas emissions and the related reductions against the Carbon Management System and according to the "Greenhouse Gas Protocol – Product Life Cycle Accounting and Reporting Standard". Further details about the fuel partners and batches can be provided upon request. Definitions of the terms mentioned in this certificate can be found on the following page.

¹Reference measures of underlying transport service for shipments in scope of GoGreen Plus, based on a fossil energy source, to facilitate comparisons.

²The above Energy Source figures are calculated with verified conversion factors and are provided for reference only.

³The fuel feedstocks used by the fuel partners follow RED II Annex IX criteria.

GLOSSARY

Term	Definition
Bio-CNG	Substitute for Compressed Natural Gas based on biogas
Bio-LNG	Substitute for Liquefied Natural Gas based on biogas
CO ₂ e	CO ₂ equivalents include carbon dioxide (CO ₂) and other greenhouse gases such as methane (CH ₄).
EV	Electric Vehicle
HVO	Hydrotreated Vegetable Oil (also known as renewable Diesel)
HFO	Heavy Fuel Oil (fossil marine fuel)
Jet-A	Conventional, fossil jet-fuel
Low Emission Transport Service	Transport Service based on sustainable fuels and/or clean technologies such as electric vehicles
MJ	Megajoule – relevant measure for energy content of Fuel
SMF	Sustainable Marine Fuel
SAF	Sustainable Aviation Fuel
tkm	Tonne-kilometer – relevant measure for transport service volume
WtW	Well-to-Wake emissions include the full lifecycle from production to use of a fuel / energy carrier used
WtW emission baseline	All GHG emissions are calculated with lifecycle (WTW) emission factors. For the year 2025, the emission factors from the GLEC Framework 3.1 (kerosene, diesel and fuels from natural gas) and from the latest IEA emission factor set (electricity and district heating) have been applied for the reference transport service
